

IN THE CLAIMS

Please find the claims to be in the form as follows:

Claim 1 (previously presented): An apparatus comprising presentation means for presenting a graphical user interface within which information is displayed and skin means for applying a skin defining an artistic background comprising one of a background color, a background shape or a specific orientation of controls to the graphical user interface so as to influence the look of the graphical user interface, characterized in that the skin means are adapted to change a currently applied skin in response to an event not originating from a user request to change the currently applied skin.

Claim 2 (previously presented): An apparatus as defined in Claim 1, characterized in that the apparatus further comprises receiving means or receiving information from a remote server, said event comprising the reception of a skin change command from the remote server.

Claim 3 (previously presented): An apparatus as defined in Claim 2, characterized in that the apparatus further comprises storage means for storing a plurality of skins, the skin change command including an identification of a respective one of the plurality of skins, the skin means being adapted to apply said respective skin to the graphical user interface in response to said skin change command.

Claim 4 (previously presented): An apparatus as defined in Claim 2, characterized in that the skin change command including a further skin, the skin means being adapted to apply said further skin to the graphical user interface.

Claim 5 (previously presented): An apparatus as defined in any one of Claims 1, characterized in that the presentation means are capable of presenting further information, the event comprising a change of a parameter of said further information.

Claim 6 (previously presented): An apparatus as defined in Claim 5, characterized in that said further information comprises audio and/or video content, said parameter representing a category

of said content.

Claim 7 (previously presented): An apparatus as defined in Claim 1 characterized in that the apparatus further comprises user profile means for maintaining a user profile, said event comprising a change of said user profile.

Claim 8 (previously presented): A computer program product for causing, when executed on a computing device, said computing device to constitute an apparatus as defined in Claim 1.

Claim 9 (previously presented): A method of generating a command to an apparatus, the apparatus having presentation means for presenting a graphical user interface within which information is displayed and skin means for applying a skin defining an artistic background within which data can be displayed to the graphical user interface so as to influence the look of the graphical user interface, characterized in that the command comprises a skin change command remotely transmitted to the apparatus for changing a currently applied skin in response to a parameter related to displayed information.

Claim 10 (previously presented): A method as defined in Claim 9 characterized in the said skin change command includes an identity of a respective skin stored in storage means of the apparatus, for controlling the skin means so as to apply said respective skin to the graphical user interface.

Claim 11 (previously presented): A method as defined in claim 9, characterized in that said skin change command includes a further skin for controlling the skin means so as to apply said further skin to the graphical user interface.

Claim 12 (previously presented): A method of distributing audio and/or video content as a method as defined in Claim 9.

Claim 13 (previously presented): A graphical user interface having a skin defining an artistic background within which data can be displayed within the graphical user interface, comprising:

a presentation mechanism within the graphical user interface that presents a set of information within the skin,

a skin change device coupled to the presentation mechanism that changes the skin without changing the set of information within the skin in response to an event not originating from a user request to a different skin.

Claim 14 (previously presented): An apparatus as defined in any one of Claims 13, wherein the event further comprises a change in a parameter defined by the further information.

Claim 15 (previously presented): An apparatus as defined in Claim 14, wherein the further information comprises audio and/or video content and the parameter representing a content category.

Claim 16 (previously presented): An apparatus as defined in Claim 13 wherein the apparatus further comprises a user profile and wherein the event is a change of within the user profile.

Claim 17 (previously presented): A computer program product that executes on a computational device creating the apparatus as defined in Claim 13.

Claim 18 (previously presented): An apparatus as defined by Claim 13 wherein the artistic background defining the skin comprises at least one of a background shape, a background color or an arrangement of controls specific to the individual skin.

Claim 19 (previously presented): A method as defined in Claim 9, wherein the artistic background defining the skin comprises at least one of a background shape, a background color or an arrangement of controls specific to the individual skin.

Claim 20 (previously presented): A method as defined in Claim 9, wherein the skin means applies a user profile as a parameter for controlling in selection of skins within the graphical user interface.
